

If you're the Systems Support Engineer we're looking for ... You'll be ...

Friendly, charming, enthusiastic and conscientious ... You'd have high standards and be described as courteous, mature and a relaxed team player ... You would thrive under pressure, and approach challenges with enthusiasm and determination.

As a PASR Systems Support Engineer you are the primary face of PASR that our clients see. You must be:

- Well presented, love smiling, trustworthy and punctual.
- Keen to learn, grow and develop your own skills and career
- Responsible for your actions, and love a challenge

You will be responsible for providing IT support to PASR's client base, ensuring their networks, servers and workstations are operating in accordance with PASR's Outsourcing Methodology.

You should have a basic understanding of personal computers and networks running Microsoft operating systems. Training will be provided in all aspects of computing and related technologies – networking, systems, communications, hardware & software.

You should have an appropriate technical qualification, and be prepared to continually upgrade your skills.

If you believe you have what it takes, then send us your resume, including relevant qualifications and experience, along with expected salary, via email to hr@pasr.net

PASR aims to provide One-Stop IT shopping to our Small to Medium Enterprise clients, permitting our clients to bypass all inter-vendor issues, finger-pointing, etc, and the need to administer and manage multiple vendor relationships – replacing these with a single point of contact for all IT-related issues.

Mission Statement.

To be the preferred Outsourcing and IT Partner to Small to Medium Enterprises in Singapore

PASR has three core competencies;

IT Outsourcing

Running the IT for organisations up to 500 seats regionally (we now have clients in Hong Kong and Shanghai, and are working with prospects in Perth, Sydney and Kuala Lumpur). Our clients range from local SMEs through to regional offices of larger MNCs, and include for example the following industries: Airlines, Logistics, Manufacturing, Internet Content providers, Legal, Shipping and more.

Development

Primarily, bespoke application development concentrating thin-client (web) front-ends. We also cater to website and eCommerce projects. We have just started on our own quasi-CRM system – of which there are many out there but none really targeted at the SMB market segment.

Systems Integration

Primarily in support of our outsourcing, we specify, plan and then supply and install infrastructure components.
